

Connecting Class Code Distribution Repo to Your classwork Folder

1. Open a GitBash session.
2. Go to your **classwork** folder: `cd classwork` (if you called your folder something else, use that name)
3. Issue the following command to connect to Frank's Code Distribution GitHub repo:

```
git remote add classcode https://github.com/grandcircusco/CSharpBootcamp_August2024_AH.git
```

4. Check to be sure your classwork folder is connected to Class Code Distribution repo with the "nickname" **classcode**

Enter the command: `git remote -v`

Expected result:

```
classcode      https://github.com/grandcircusco/CSharpBootcamp_August2024_AH.git (fetch)
classcode      https://github.com/grandcircusco/CSharpBootcamp_August2024_AH.git (push)
origin https://github.com/your-git-hub-id/classwork.git (fetch)
origin https://github.com/your-git-hub-id/classwork.git (push)
```

5. Enter the command:

```
git pull classcode main --allow-unrelated-histories
```

This will copy any new code in Class Code Distribution repo into your **classwork** folder.

You will use the following command from your **classwork** folder any time Frank tells you he has new code for you to download:

```
git pull classcode main
```

6. Issue the **ls** command. You should see a file called: **README.md**

This file contains a description of the class code repo
